

Date	30 September 2026
Team ID	SWTID-2026-7220
Project Name	import data using transform maps(spreadsheet)
Maximum Marks	2 Marks

Project Design Phase

Problem - Solution Fit Template

Problem - Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ Understand the existing situation in order to improve it for your target group.

Template: Problem - Solution Fit Canvas

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? Database Administrators, Data Entry Specialists, IT Support Teams, and Operations Managers dealing with high-volume data ingestion.	6. CUSTOMER CONSTRAINTS CC What constraints prevent action? Lack of programming knowledge to write custom ETL scripts. Strict corporate data security policies. Limited budget for expensive enterprise data integration tools.	5. AVAILABLE SOLUTIONS AS What are the alternatives? Manual copy-pasting (high error rate). Custom Python/SQL scripts (requires dev time). Fragile Excel macros. Free online converters (security risks).	Explore AS, differentiate	
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which problems do you address? Need to bulk import data from diverse spreadsheets into a fixed relational database. Mapping dynamic column names to rigid schemas without coding.	9. PROBLEM ROOT CAUSE RC What is the real reason? Different departments/vendors use inconsistent column naming conventions and date formats in spreadsheets, which collide with strict database schemas.	7. BEHAVIOUR BE What does your customer do? Opening spreadsheets side-by-side to cross-check data manually. Raising IT support tickets for imports. Manually deleting duplicate rows post-import.		understand RC
	3. TRIGGERS TR What triggers customers to act? Receiving new monthly data dumps. Legacy system migrations. Database crash alerts due to mismatched manual uploads.	10. YOUR SOLUTION SL Write down your solution: A web interface allowing users to seamlessly upload spreadsheets and visually drag-and-drop column mappings to target database fields (Transform Maps). Users can save these mappings as reusable templates, enabling automated, error-free background ingestion for future data batches without writing a single line of code.	8. CHANNELS OF BEHAVIOUR CH 8.1 ONLINE Searching StackOverflow for data cleaning scripts. Looking for CSV-to-SQL converters online. Tech forums. 8.2 OFFLINE Complaining in departmental meetings about data bottlenecks. Manually sorting through printed spreadsheets.		
4. EMOTIONS: BEFORE/AFTER EM How do they feel? <i>Before:</i> Frustrated, overwhelmed, anxious about data corruption. <i>After:</i> Relieved, productive, confident in data integrity.
