

Date	30 September 2026	Team ID	SWTID-2026-7220
Project Name	import data using transform maps(spreadsheet)		

PROBLEM-SOLUTION FIT CANVAS 2.0

1. CUSTOMER SEGMENT(S)

CS

Who is your customer?

Data Entry Operators, Database Administrators, System Integrators, and IT Support staff across enterprises and SMEs who deal with frequent bulk data ingestions.

2. JOBS-TO-BE-DONE / PROBLEMS

J&P

Which problems do you address?

- Importing massive datasets from Excel/CSV into a relational database.
- Mapping varying spreadsheet columns to fixed database schemas without writing code.
- Avoiding duplicate records or corrupted data during uploads.

3. TRIGGERS

TR

What triggers customers to act?

Receiving new monthly data batches from clients; Migrating legacy data to a new CRM/ERP system; Experiencing database crash alerts due to mismatched column formats during a manual upload.

4. EMOTIONS: BEFORE / AFTER

EM

How do customers feel?

Before: Overwhelmed, frustrated by repetitive manual entry, anxious about data loss.
After: Relieved, productive, in control of data pipelines, confident in data integrity.

5. AVAILABLE SOLUTIONS

AS

What solutions are currently available?

Manual copy-pasting (slow, high error rate). Writing custom Python/SQL scripts (requires developer time). Excel macros (fragile, hard to maintain for non-tech users).

6. CUSTOMER CONSTRAINTS

CC

What prevents them from taking action?

Lack of programming skills (unable to write ETL scripts); strict corporate data security policies; lack of budget for expensive, enterprise-grade ETL integration software.

7. BEHAVIOUR

BE

What does your customer do to address it?

Opening spreadsheets side-by-side with database forms to manually cross-check data. Submitting IT support tickets to request database imports. Searching for quick Excel formulas to clean data.

9. PROBLEM ROOT CAUSE

RC

What is the real reason this problem exists?

Different departments, vendors, and clients use inconsistent column naming conventions and date formats in spreadsheets, while databases require rigid, standardized schemas.

8. CHANNELS OF BEHAVIOUR

CH
