

FINAL PROJECT REPORT

Project Name: Import Data using Transform Maps
(Spreadsheet)

Date: 30 September 2026

Team ID: SWTID-2026-7220

TABLE OF CONTENTS

1. INTRODUCTION

- 1.1 Project Overview
- 1.2 Purpose

2. IDEATION PHASE

- 2.1 Problem Statement
- 2.2 Empathy Map Canvas
- 2.3 Brainstorming

3. REQUIREMENT ANALYSIS

- 3.1 Customer Journey map
- 3.2 Solution Requirement
- 3.3 Data Flow Diagram
- 3.4 Technology Stack

4. PROJECT DESIGN

- 4.1 Problem Solution Fit
- 4.2 Proposed Solution
- 4.3 Solution Architecture

5. PROJECT PLANNING & SCHEDULING

- 5.1 Project Planning

6. FUNCTIONAL AND PERFORMANCE TESTING

- 6.1 Performance Testing

7. RESULTS

- 7.1 Output Screenshots

8. ADVANTAGES & DISADVANTAGES

9. CONCLUSION

10. FUTURE SCOPE

11. APPENDIX

- Source Code (if any)
- Dataset Link
- GitHub & Project Demo Link

1. INTRODUCTION

1.1 Project Overview

The "Import Data using Transform Maps (Spreadsheet)" project is designed to streamline the process of transferring data from user-uploaded spreadsheets (CSV, Excel) into a target database system. By utilizing transform maps, the application provides a flexible engine that maps incoming columns to the appropriate database fields, ensuring data integrity and reducing manual entry errors.

[Placeholder: Add more details about the background of the project and why this spreadsheet import module is critical for your specific domain.]

1.2 Purpose

The primary purpose of this project is to automate bulk data processing. Manually entering records from spreadsheets is time-consuming and prone to human error. This solution empowers users to define transformation rules once and reuse them for subsequent uploads, drastically improving efficiency.

[Placeholder: Explain the specific goals, target audience, and the overall impact the project aims to achieve.]
